## IT-Blockkurse der Physik im Herbst 2026

Anmeldung ab 6. Juli 2026 (SPUR, Wintersemester 2026/27)

|                   |                                                                                                               |                                                                                                   |
|-------------------|---------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 31.08. – 04.09.26 |                                                                                                               |                                                                                                   |
| 07.09. – 11.09.26 |  <b>MathWorks®</b><br>Matlab | <br>Elektronik |
| 14.09. – 18.09.26 | <pre>int main(void) { return 0; }</pre><br>Programmieren in C                                                 |                                                                                                   |
| 21.09. – 25.09.26 |                                                                                                               |                                                                                                   |
| 28.09. – 02.10.26 | <b>L<sup>A</sup>T<sub>E</sub>X</b> Grundkurs                                                                  | <b>L<sup>A</sup>T<sub>E</sub>X</b> Fortgeschritten                                                |
| 05.10. – 09.10.26 |  Linux                     | Mechanik-CAD                                                                                      |

## Semesterbegleitende IT-Kurse der Physik im Wintersemester 2026/27

|                                                                                                                                |                                                                                                                  |
